ADF&G TECHNICAL DATA REPORTS

This series of reports is designed to facilitate prompt reporting of data from studies conducted by the Alaska Department of Fish and Game, especially studies which may be of direct and immediate interest to scientists of other agencies.

The primary purpose of these reports is presentation of data. Description of programs and data collection methods is included only to the extent required for interpretation of the data. Analysis is generally limited to that necessary for clarification of data collection methods and interpretation of the basic data. No attempt is made in these reports to present analysis of the data relative to its ultimate or intended use.

Data presented in these reports is intended to be final, however, some revisions may occasionally be necessary. Minor revision will be made via errata sheets. Major revisions will be made in the form of revised reports.

Appendix A, Volume IV, presents the estimated contribution of all tagged release groups, identified by a unique tag code, from the State of Oregon. Contributions are ordered by ascending coded wire tag (CWT) codes. The number of tags having a specific code and recovered by area (No.), the estimated total number of tags in that commercial catch stratum (Tags), and the total estimated number of fish from the release group identified by the given tag code (Exp.) are presented for fishtrap and gillnet gear (Tables a), purse seine gear (Tables b), troll gear by district (Tables c), and troll by PMFC and quadrant (Tables d). Standard errors are noted in parentheses below the estimates. Information associated with each release (tag code, last month in which fish were released, agency which conducted the tagging, facility where the fish were reared, site where the fish were released, run type, brood year, age (European notation) of the fish when it was caught, total number of tagged and untagged fish released, and number of tagged fish released) are given above each table. The caption 'Unknw Stat Week' refers to coded wire tags which were recovered in unknown time strata. The caption 'Unrecorded District' refers to tags recovered in an unknown area strata. Tags which could not be assigned to a specific fishery are noted after the troll fishery tables. Since commercial catch (fish ticket) data cannot be associated with tags taken from fish captured at unknown times, in unknown areas, or with unknown gear, expanding the number of tags to the number of fish of the release group in the catch cannot be estimated. Note also that in a wild stock tagging study the number of untagged fish is unknown, precluding expansion of the number of estimated tags in the harvest to total contribution of that wild stock to the commercial catch. Therefore no value is reported for the total contribution of a wild stock.

Note: A total of 1 chinook salmon belonging to tag group 071641 were counted in Southeastern Alaskan commercial fisheries. However the type of gear is unknown. The district of catch is 104 and week of catch is 27. Tag code 071641 identifies CEDAR CREEK Fall chinook salmon of the 1977 brood year, released at NESTUCCA R in 11/78 and caught at age 04. The total number of fish released was 58764 of which 24574 were tagged.
